DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 & 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Castle (5,429,594) in view of " *Photoreduction of Heme Proteins: Spectroscopic Studies and Cross-Section Measurements*" (Gu et al.). Castle discloses an extracorporeal blood system having blood outlet and inlet lines for withdrawing blood

Application/Control Number: 10/073,084

Art Unit: 3762

and directing it to a housing (17) where the blood may be subjected to ultraviolet light/irradiation. The blood includes hemoglobin transport vesicles and hemoglobin vesicles naturally occur with a phospholipid layer as an outer layer. The blood will also include naturally amino acids, which may serve as the electron donor.

Page 3

Castle does not teach that the irradiation oxidizes the hemoglobin into methemoglobin by irradiating the hemoglobin with UV. Gu et al. teaches that upon excitation by UV rays the hemoglobin undergoes photoreduction and dissolved oxygen, i.e. hemoglobin loses its ability to bind the oxygen. At the time of the invention, it would have been obvious to one having ordinary skill in the art to use the method and system of Castle for irradiating blood, which includes a hemoglobin vesicle, and result in the excitation by UV rays the hemoglobin undergoes photoreduction and dissolved oxygen, which will cause hemoglobin loses its ability to bind the oxygen.

Allowable Subject Matter

Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning the rejections contained within this communication or earlier communications should be directed to examiner Tricia Bianco whose telephone

Application/Control Number: 10/073,084 Page 4

Art Unit: 3762

number is (703) 305-1482. The examiner can normally be reached on Monday through Fridays, alternating Fridays off, from 9:00 AM until 6:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on (703) 308-5181. The official fax numbers for the organization where this application or proceeding is assigned is (703) 872-9306 for regular and After Final communications.
